

# Changes302

## Changes in 3.0.2

(additional [ChangeLogs](#))

**bug 4015:** rpmbuild find perl(DBI) as requirement

**bug 4005:** Yahoo groups messages flagged as forged

**bug 4030:** incapable Net::DNS module usage should be a warning, not a debug

**bug 2462:** detect legitimate SMTP AUTH submission, to avoid false positives on Dynablock-style rules; thanks to Daryl C. W. O'Shea for the patch

**Bug 4019:** Needed to add in RPAD call wherever token was used in a select

**bug 3961:** Docu fix for two contradicting explanations of the -x switch. Plus some small wordsmithing.

Rewrite information about free VC++ downloads to include the need to and how to get and install nmake

**bug 4014:** change spamcop\_submission\_address to correct name, spamcop\_to\_address

have the URIDNSBL plugin handle both head and body evals as a kluge from 3.0.0

**bug 3990:** two small regexp errors in RegistrarBoundaries

**bug 3967:** fix performance issues with USERPASS and RATWARE\_STORM\_URI

**Bug 3953:** Provide better debug output for sa-learn --restore

**bug 3816:** deal with 'rewrite\_header Subject' markup when no Subject header previously existed

**bug 3950:** Exim 'sender\_fullhost' var was not recognized by Received header parser; fixed

**bug 3942:** EvalTests::\_check\_recipients() would sometimes parse out the wrong addresses/overwrite entries on the array/etc.

**bug 3648:** make sure that the read in config has a newline at the end of the last line

**bug 3941:** spamcop now only wants max 2 day old mail

**bug 3922:** fix 'make test' failure on Solaris

**bug 3931:** disable the 'plugin inhibited further callbacks' debug message. it doesn't share any useful information, and clutters up the debug output.

**bug 3930:** uridnsbl plugin didn't respect the uridnsbl\_max\_domains value, nor did it allow it as a configuration option even though it's in the documentation...

**bug 3928:** trivial rule fix for MSCRM
