

# FindingIntegrations

Where can I find out about how to integrate [SpamAssassin](#) with (some mail system)?

There's a whole load of integration glue out there, integrating [SpamAssassin](#) with virtually every mail system. To keep track of them, there are two places:

- The "[Where SpamAssassin is Used](#)" page on the main website. This is now mostly superseded.
- This Wiki. See for example [IntegratedInMta](#) and [IntegratedInMua](#).

If you've come up with a new tool which supports SA, please post a note in this Wiki.
