Reach me at jonathan@pnc.net

My homepage: <http://www.buhacoff.net>

I wrote a perl version of "webuserprefs" (see [WebUserInterfaces](#)) ... it's available to anyone interested but I haven't had time to package it up and put it online yet.

I also wrote an OS X [StartupItem](#) for spamd. Download it from <http://apricoti.pbwiki.com/SpamAssassinStartupItem>

In the installer I included the [SpamAssassin](#) logo. Hope that's ok. If there's some legal problem with that, just let me know and I'll republish the installer w/o the logo.
