MailAuditBodyError

When I use SpamAssassin with Mail::Audit, I get a *you cannot use body()* error.

Using a version of Mail::Audit later than 2.1 at least, this error will appear when you call the SpamAssassin rewrite_mail method:

```
you cannot use body() to set the encoded contents
at /usr/lib/perl5/site_perl/5.6.1/Mail/SpamAssassin/EncappedMessage.pm line 37
```

This is caused by an API which changed in Mail::Audit. Either wait for the next release of SpamAssassin for a workaround, or work around it yourself by using the nomime option when constructing the Mail::Audit object:

```
$msg = Mail::Audit->new(nomime => 1);
```

(Thanks to Jake Edge for the answer).
