

MeasuringAccuracy

Measuring Spam Filter Accuracy

Here are various schemes used to measure spam-filter accuracy. First, multiple-figure measurement schemes:

- [FpFnPercentages](#): our favourite!
- [BattingAverage](#): John Graham-Cumming's new system
- [PredictiveValue](#): how the MDs do it
- [PrecisionAndRecall](#): how text classifiers do it

Single-figure measurements:

- [TotalCostRatio](#): Ion Androutsopoulos' scheme

And measurements across a range of thresholds:

- [RocGraphs](#): the radar operator's favourite
