JMeterAndHTTPS

JMeter and HTTPS

Making HTTPS Requests

JMeter can make HTTPS requests - just create an HTTP Request Sampler, and set the protocol to https (instead of blank).

Problems With Invalid SSL Server Certificates

These should no longer occur; JMeter now ignores all certificate errors such as expiry and incorrect hostname.

Recording HTTPS

Since JMeter 2.4, the JMeter proxy can record HTTPS requests like HTTP requests.

You must accept a special ssl certificat "Apache JMeter" when you record your session.
