

JMeterPerformance

JMeter Performance evolution across versions ($\geq 2.5.1$)

This article is the record of a Test done in the following conditions:

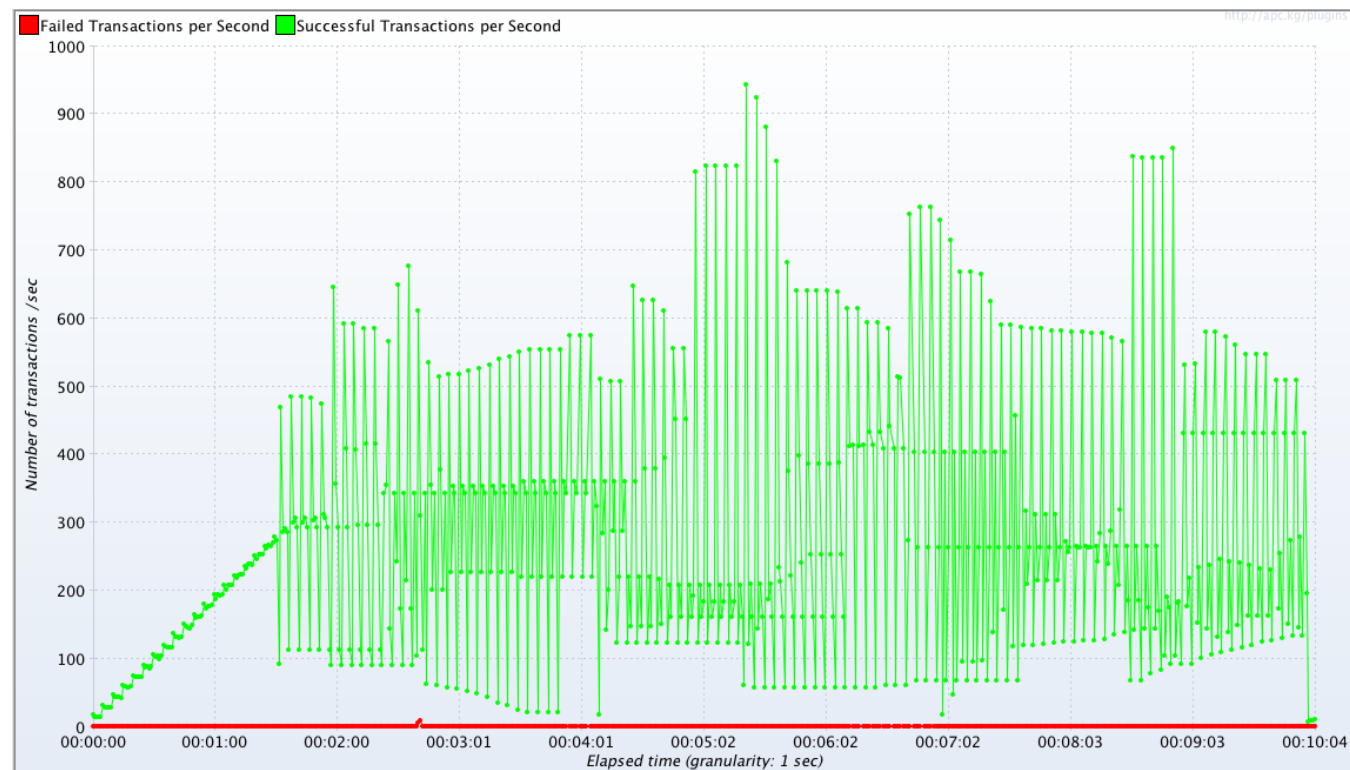

- Tomcat version 6.0.24
- Tomcat JVM : -Xms256m -Xmx1024m
- JMeter JVM : -Xmx512m
- Set session timeout in web.xml to 1 minute
- Java version "1.6.0_29"
- Java(TM) SE Runtime Environment (build 1.6.0_29-b11-402-10M3527)
- Java HotSpot(TM) 64-Bit Server VM (build 20.4-b02-402, mixed mode)
- Mac OS 10.6.8
- JMeter and Tomcat on same machine
- No particular OS Tuning
- RAM : 8 Go 1067 MHz DDR3
- Processor : 3.06 GHz Intel Core 2 Duo
- No swap
- Simple Test plan using Tomcat examples
- Test Plan:
 - Ramp-up period : 100 seconds
 - Number of Threads : 1500
 - Scheduler checked:
 - Duration: 10 minutes (So test will run just 10 minutes forcing stop at 10th minute)
 - Startup Delay : 7 seconds
- CSV output

Test Plan:

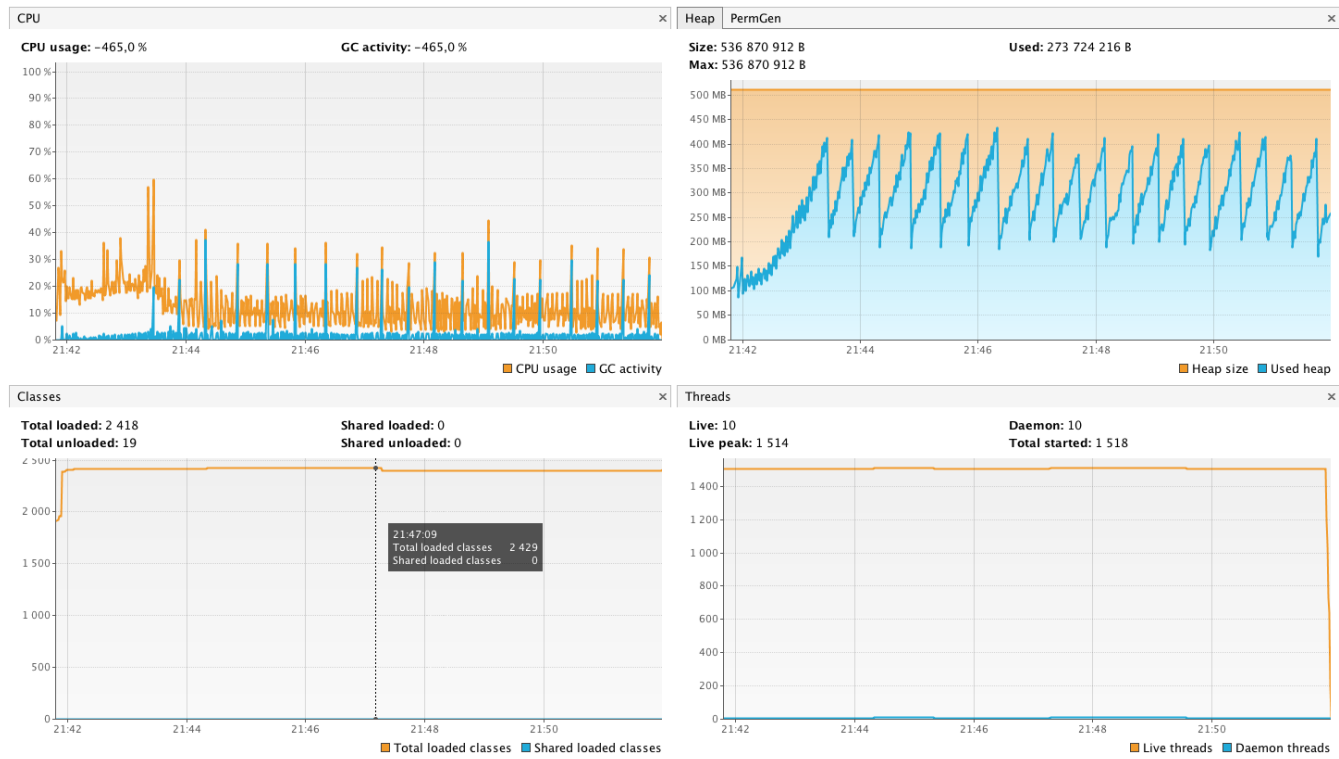

Test Plan used : [TestPlan.jmx](#)

JMETER 2.5.1

Transactions:

JVM Behaviour:

GC Activity:

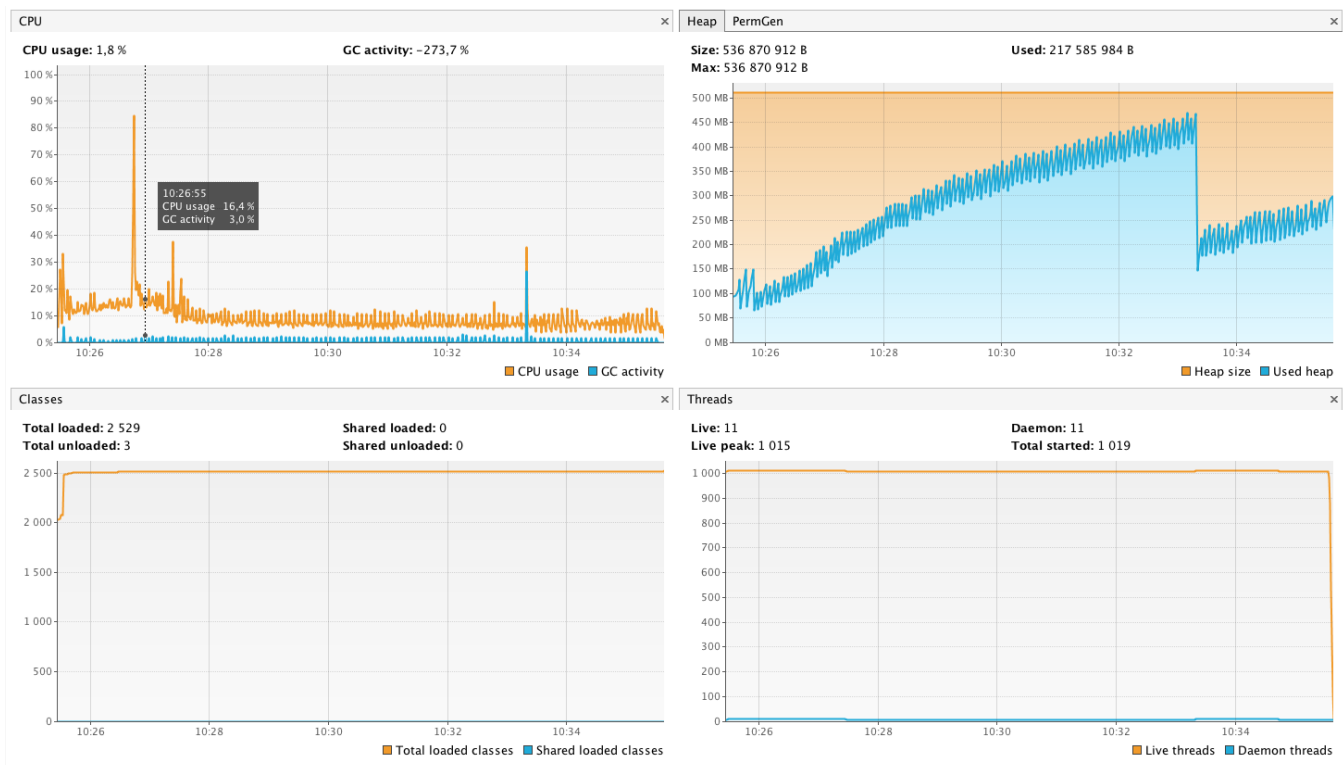

- GC activity is much higher with around 5 GC CPU peaks every 2 minutes
- and 20 FULL GC of 700 to 800 ms each
- Throughput: 97,71%
- Pauses : 13,69s
- Memory Cleaned : 391m/min
- Full GC tend to be much more frequent at end of test

JMETER 2.6:

Transactions:

JVM Behaviour:

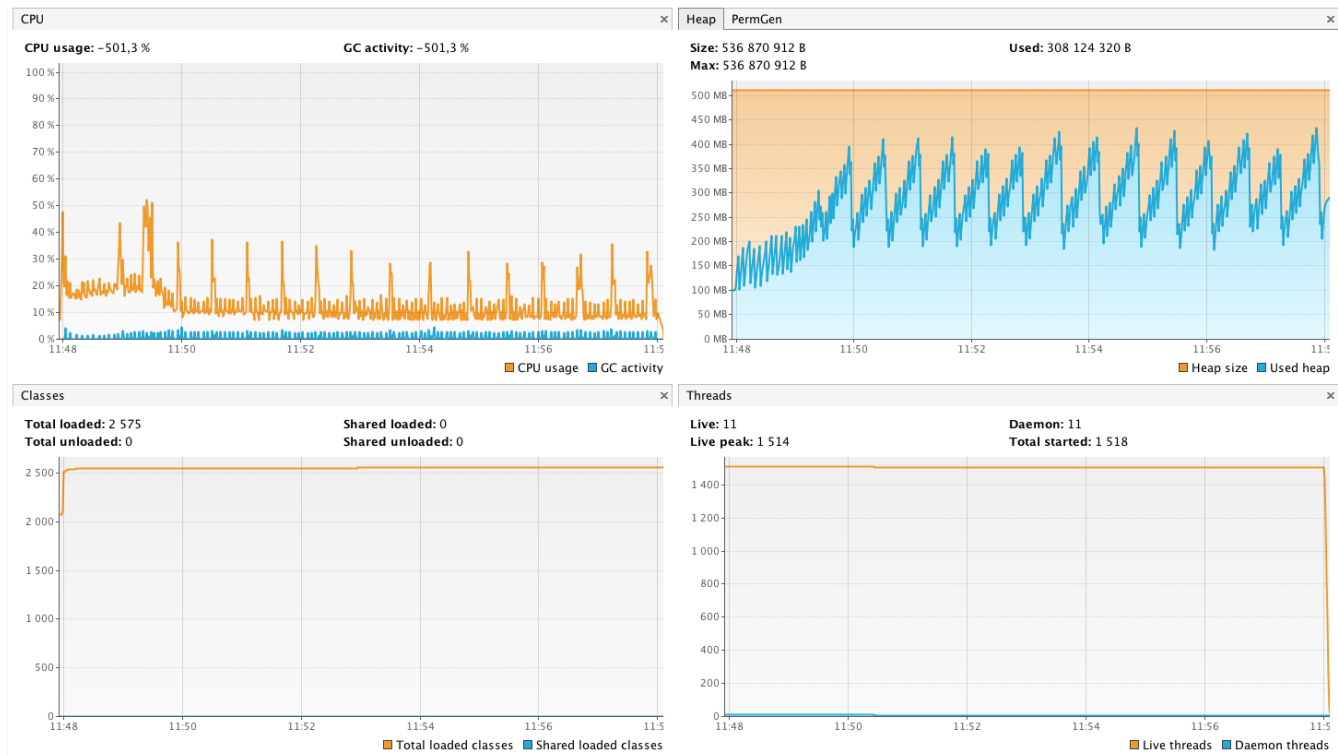

JMETER 2.7:

Transactions:

JVM Behaviour:

GC Activity:

- No GC CPU peak,
- 1 FULL GC
- Throughput: 98.54
- Pauses : 8.9s
- Memory cleaned: 1108m /min

JMETER 2.8:

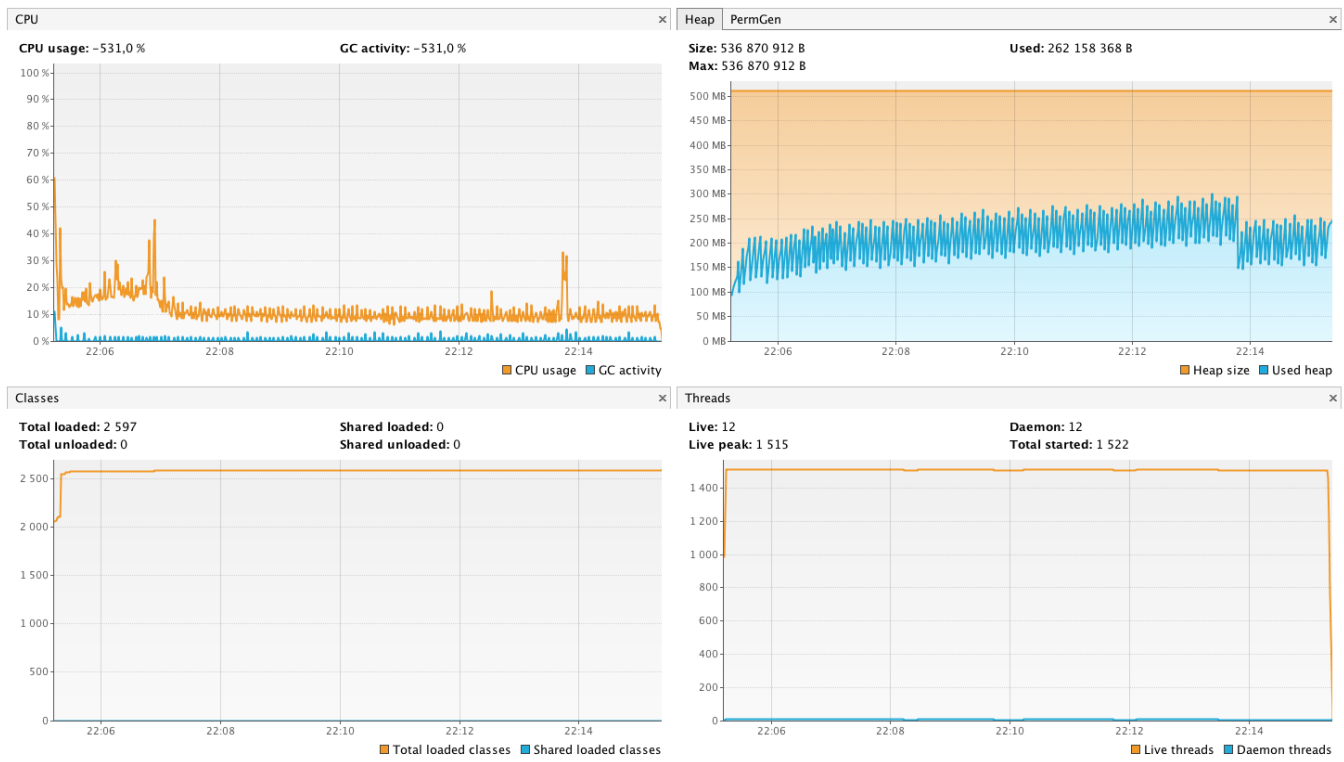

Transactions:

Graph Limiting 150 points in row:

JVM Behaviour:

GC Activity:

- No GC CPU peak,
- No FULL GC
- Throughput: 98.89%
- Pauses : 6.72s
- Memory cleaned: 1391m /min

Conclusion

- No significant improvement between 2.6 and 2.5.1
- Significant improvement between 2.7 and 2.6
- Significant improvement between 2.8 and 2.7
- Better memory behaviour
- More accurate response times with High Load

JMeter 2.8 Additional Test (to check time taken is fine)

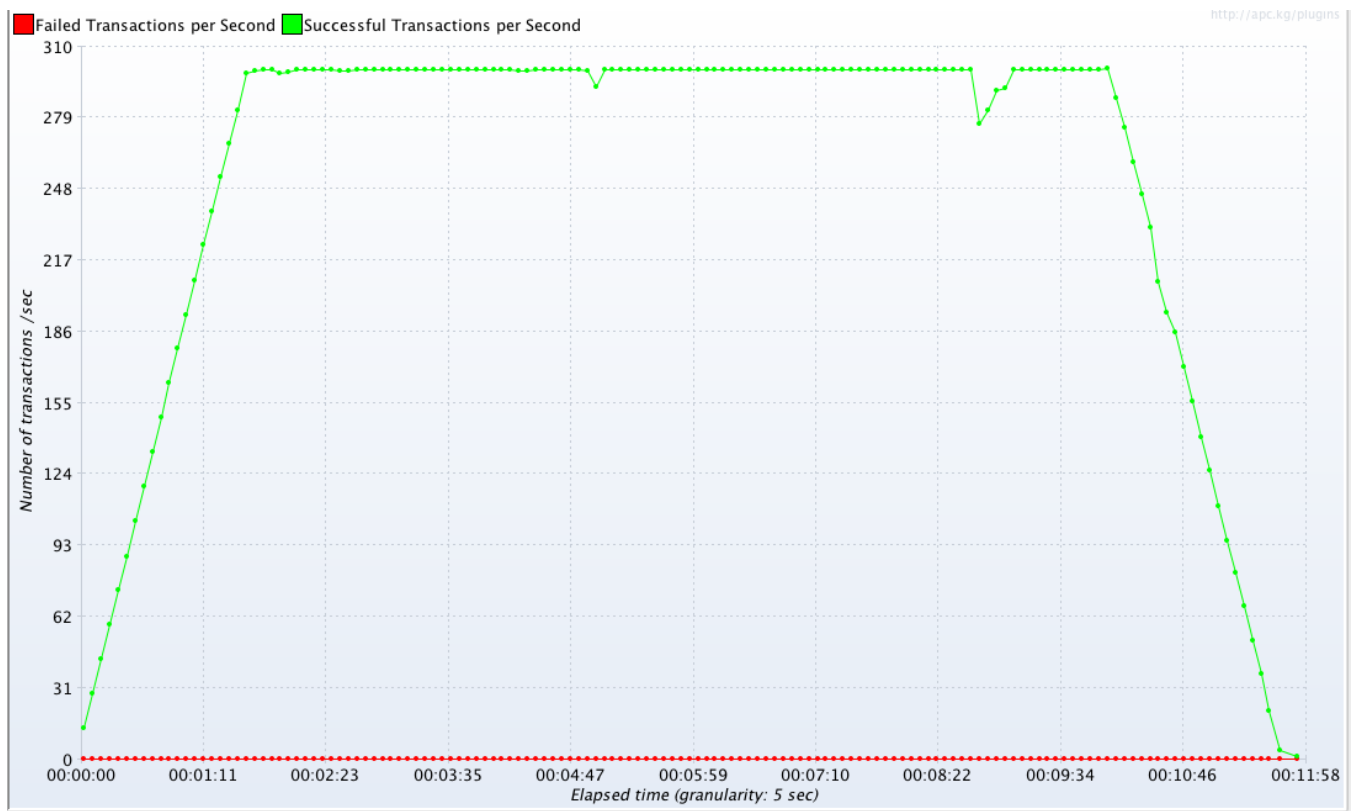

- In this test, to let threads complete, we increase Test Duration to check no delay happens which can reveal abnormal behaviour.
- Test Plan same as before with following changes:
 - Ramp-up period : 100 seconds
 - Number of Threads : 1500
 - Scheduler checked:
 - Duration: 800 seconds (So all threads should complete before that time)
 - Startup Delay : 7 seconds

Test Plan for additional Test:

Test Plan used :

[PerformancePlan-2.8.jmx](#)

Transactions:

Conclusion

No delay, everything is OK.
