

HowToRelease WebsiteChanges

Website Release Changes

[Back To HowToRelease](#)

This is a list of website updates that should be made for a new release.

1. Update news in solr/src/site/src/documentation/content/xdocs/index.xml - see [Website_Update_HOWTO](#). This update should be included in the release artifacts. | ⓘ |Note: be sure to deploy the updated website once the release is ready as well |
2. Add the new release info to the doap.rdf file. | ⓘ |Note: double check for any other updates that should be made to the doap file as well if it hasn't been updated in a while | | |Note: this file is used to power Solr's Listing on <http://projects.apache.org/> as well as the Recent Apache Releases RSS feed |
3. Update news for main lucene.apache.org site stored at <https://svn.apache.org/repos/asf/lucene/cms/trunk>. This change may require additional rights or patch submitted to the Lucene PMC - see <http://lucene.apache.org/site-instructions.html>
