Jetspeed2 JetspeedHomeYieldsBlankPage

just built js2 according to direx and http://localhost:8080/jetspeed is yielding a blank page

is this the expected result or is there something wrong with my setup?

i noticed some discussion of jaas issue, but it seems like the patch is present in the tomcat directory...

any guidance appreciated, thanks,
tony.

---

update:

closer examination of log files indicates that this problem is a manifestation of Jetspeed2/PrefsClassloaderIssuesAndSdk14

A blank page could mean any number of things went wrong. First check for errors in logs/jetspeed.log then in you app servers logs.
