<folder id="subfolder16" description="Sub folder 16" skip="false">

<!-- The value attribute in the decorator definitions below reference a parent variable to which
the decorator must be assigned.
As an example the below page definition can be programmed as:
folder.setPageDecorator("default", pageDecorator);
--&gt;
&lt;decorator id="jetspeed" type="page" value="default" decoration="jetspeed-blue"&gt;

<!-- specify as default topmenu menu decorator a pulldownmenu with an marine menu decoration --&gt;
&lt;decorator id="pulldownmenu" type="menu" value="topmenu" decoration="marine"/&gt;

<!-- override the default decoration on the leftmenu menu decorator for this folder --&gt;
&lt;decorator type="menu" value="leftmenu" decoration="yellow"/&gt;

<!-- default disable the rightmenu decorator for this folder --&gt;
&lt;decorator type="menu" value="rightmenu" disabled="true"/&gt;

<!-- specify as default portlet decorator the jetspeed portlet decorator with jetspeed-blue decoration--&gt;
&lt;decorator id="jetspeed" type="portlet" value="default" decoration="jetspeed-blue"/&gt;

<!-- menu parameters --&gt;
&lt;menu id="tabmenu" level="1" depth="2"/&gt;
&lt;menu id="treemenu" level="3" depth="0"/&gt;

<!-- Folder elements displayed in the menu (in the current example in tabmenu if level &lt; 3 or in treemenu otherwise)
in the order as defined
--&gt;
&lt;elements&gt;
&lt;page id="page1" description="Page 1"/&gt;
&lt;page ref="../subfolder2/page8"/&gt;
&lt;page ref="/subfolder1/subfolder2/page9" description="Page 9" /&gt;
&lt;folder id="subfolder1"/&gt;
&lt;folder ref="/subfolder1/subfolder3"/&gt;
