

# BoardReport-June2010

## June 2010 Board Report

### Status

We really need someone to step up and do some site/build work. It has been a hindrance for some time.

### Community changes

No new PMC members were voted in since the last board report.

Antonio Petrelli (apetrelli) was voted in as a Velocity committer on June 2nd.

### Velocity Engine project

Released versions 1.6.4 (should be last in 1.6 branch) and 1.7-beta1. Actual development is slow/quiet; one active committer and one active-voted-in-but-no-karma-yet-committer. Getting good bug reports and active user list. 2.0 development has taken a back seat to 1.6/1.7 but is not forgotten.

### Velocity Tools project

Released version 2.0 finally!! Current development of Tools is slow/quiet; 1.5 active committers and one active-voted-in-but-no-karma-yet-committer. Getting good bug reports and light user list activity. Sandbox directory has been requested by contributor to revamp Maven build; the PMC agreed, but this must be done by the chair who has not done it.

### Velocity Anakia project

There were no changes in the Anakia code base. No Anakia development happened in the last month. Several users have popped up with problems and questions recently, but no one in the developer community has been able/willing to help.

### Velocity Texen project

There were no changes in the Texen code base. No Texen development happened in the last month. Users are out there, but don't show their faces around here, at least not in a very long time.

### Velocity DVSL project

There were no changes in the DVSL code base. No DVSL development happened in the last month. No bug reports or list activity in a very, very long time.

### Velocity Docbook project

There were no changes in the Docbook code base. No Docbook development happened in the last month. No bug reports or list activity in a long time.
