

IntelliJ Templates

IntelliJ-Live-Template.xml is a set of templates for the IntelliJ IDEA IDE (<http://www.intelliij.com>)

Contributed by Rickard Öberg <rickard@xpedio.com>, he wrote :

I've written a bunch of Velocity Live Templates for the IntelliJ IDE. They're simply the directives but which expands to the full syntax.

E.g. "#foreach" followed by space expands into:

#foreach (\$| in 🙄

#end where | are markers for entering parameters.

They make template editing much faster and avoids silly errors such as forgetting #end.

Live templates are stored in the following location:

- Windows: <your home directory>\.<product name><version number>\config\templates
- Linux: ~/.<product name><version number>\config\templates
- MacOS: ~/Library/Preferences/<product name><version number>/templates

IntelliJ-Live-Template.xml:

```
<?xml version="1.0"?>

<!--
  This is a template for the IntelliJ IDE so that it will make it
  easier to add Velocity Template Language to your Velocity files.

  Contributed by: Rickard Öberg <rickard@xpedio.com>
-->
<templateSet group="Velocity">
