

# VelocityEditors

## Velocity and Development Tools

These contributions from the user community can make developing with Velocity easier and more convenient. If you have additional plugins to editors or IDE's, please add them to the bottom of the list below.

### Eclipse

Veloclipse is a Velocity editor, based on Veloedit, which also provides smart editing of XML and HTML files. <http://code.google.com/p/veloeclipse/>

JointLogic provides [Web Designer plug-in](#) that allows WYSIWYG authoring of HTML and XHTML documents and fragments with embedded Velocity template language elements.

Joe Hudson (joe@binamics.com) has created a [plug-in](#) for editing templates with the [Eclipse](#) IDE. Features include: content assist (Velocity directives, variables, macros, javascript, HTML, java context objects), outline view (HTML & Directive) and syntax highlighting.

Torsten Juergeleit (tjuergeleit@yahoo.de) has created a [plugin](#) for editing templates with the [Eclipse](#) IDE.

aloba ag has integrated a velocity editor into their [Eclipse](#) based opensource [GeneratorFramework](#) named [QiQu](#). It is based on Torsten Juergeleit's veloedit, but extends it with a realtime preview and improved code assistance. Refer to the [QiQu](#)documentation for details.

### BBEdit

A [Velocity Language Module](#) is provided by [Wishingline](#) for the [BBEdit](#) Macintosh editor.

### Boxer Text Editor

David Hamel has created a color [syntax definition file](#) for highlighting Velocity macros in the [Boxer Text Editor](#).

### Coda 2

Benjamin Dunn (dunn.bobcat@gmail.com) has contributed a syntax highlighting mode for [Coda 2](#), available [here](#).

### Dreamweaver

Jason Gill (aka Pete the Chop) created a [Dreamweaver Extension](#) that gives full Velocity support in the [Dreamweaver](#) web editor.

### IntelliJ IDEA

Rickard Oberg (rickard@xpedio.com) has contributed templates for the [IntelliJ IDEA](#) IDE. View it at [IntelliJTemplates](#).

Dennis Lundberg has contributed a [IntelliJSyntaxHighlighting](#) file type configuration for IntelliJ IDEA. It gives you syntax highlighting for .vm files.

### UltraEdit Editor

Herve Guidetti (Herve.Guidetti@linkvest.com) contributed a 'word.txt' addition (with tweaks and comments by Wido Hillmann (wido.hillmann@epost.de) for the [UltraEdit](#) programmers editor. Find this at [UltraEdit](#).

### JEdit

Saimon Moore (smoore@serikat.es) contributed a Velocity mode for the java-based editor [JEdit](#), and can be found here in [JEditTemplate](#).

### TextPad

Jeff Linwood (jeff@greeninja.com) created a simple syntax definition for Velocity for the [TextPad](#) editor, which can be found [here](#).

### Emacs

Brian Leonard (brian@brainslug.org) contributed a minor mode that does font-locking (syntax coloring) of VTL in [XEmacs](#) and [GNU Emacs](#). As a minor mode, it insinuates itself into whatever major mode you're using, so you don't lose the major mode's goodness. Read more about it in [EmacsVtlMode](#).

### Textmate

Tom Armitage (tom@infovore.org) has produced a bundle for Textmate that provides syntax highlighting and some snippets. It's in its early stage, so contributions are welcome. You can find it hosted at its [Google Code site](#) for now.
