

ThriftUsageSqueak

Library

To get started, just file in thrift.st with Squeak, run thrift -st on the tutorial .thrift files (and file in the resulting code), and then:

```
calc := CalculatorClient binaryOnHost: 'localhost' port: '9090'.  
calc addNum1: 10 num2: 15
```

Tested in Squeak 3.7, but should work fine with anything later.
