

Bandwidth

```
<context-param>
  <description>
    Use this context parameter to enable compression in MyFaces version 1.1.4 and later.
  </description>
  <param-name>org.apache.myfaces.COMPRESS_STATE_IN_CLIENT</param-name>
  <param-value>true</param-value>
</context-param>
```

Enabling compression will effect performance. Client side state saving is compressed by default in version 1.1.3 and before, where this context parameter means nothing.
