

# EditXdocs

## Use XMLMind to edit xdocs

You can use the XMLMind XML editor to edit xdocs visually by installing the xdocs configuration.

- Install XMLMind from [XMLMind Editor page](#). It is written in Java and runs on all major OS brands.
- Download [XMLMind\\_XDOC\\_Myfaces.zip](#) configuration. Unpack it into the XMLMind Editor user preferences directory below. (The user preferences directory location documentation is [here](#).)
  - \$HOME/.xxe/addon/ on Unix,
  - %SystemDrive%\Documents and Settings%USERNAME%\Application Data\XMLmind\XMLeditor\addon\ on Windows 2000/XP,
  - %SystemDrive%\winnt\Profiles%USERNAME%\Application Data\XMLmind\XMLeditor\addon\ on Windows NT.
- Restart the Editor. Select *File -> New*. It should offer you *XDOC -> Empty Doc* and *XDOC -> Myfaces Component* if the addon was installed correctly.
