

VersionNumbering

Marmotta versions are composed as `"*A.B.C*"`, where:

- **A** denotes the version.
 - Marmotta started with version 3.0
 - All previous versions were actually part of [LMF](#)
- **B** denotes a major revision, where even numbers are public releases, while odd numbers are used for development snapshots or internal deployments
- **C** indicated minor revisions (bug fixes, security updates and so on)
 - All versions with the `-SNAPSHOT` suffix are development snapshots that should not be used in production systems
 - The suffix `-incubating` refers to those releases under [Apache Incubator](#)
