ReportForSep2006

Status report for the Web Services Project

Notable Happenings

Axis2 project has gone through a number of improvements after its 1.0 release , specially code generation and data binding. In the mean time new features were introduced + numerous bug fixes. Axis2 development team is planning to do Axis2 1.1 release on 18th of September.

Code Releases [since the last report]

- XML-RPC released v3.0rc1 on Jul 27, 2006
- XML-RPC released v3.0 on Aug 30, 2006
- Axis2/C released v0.93 on Aug 31, 2006

New Projects

Legal Issues

Cross-Project Issues

- Apache Sandesha and Apache Kandula are not interoperating currently, but Kandula2 is on progress which will interoperate with Sandesha2 and other modules in Axis2.

Problems with committers, members, projects etc?

- The JaxMe project is extremely quiet. In the large two weeks, several bug fixes have occurred, but apart from that the project is approaching archiving status.

Subproject News

- The XML-RPC project has merged its "user" and "dev" mailing lists, in order to have a single, but larger community. The traffic on both lists wasn't high enough for two separate discussion lists. A new mailing list "auto" was established for jira and svn notifications.
- The Muse project has made significant progress towards a 2.0 release with new contributions from programmers at Cisco, Compuware, and IBM. The team is currently under code freeze and working on its tutorial content.
