

TopLevelProposal

Name

search.apache.org

Scope

The search.apache.org project will initially comprise Lucene and the sibling Lucene Sandbox repositories.

Goal

Search is king. The search.apache.org project unites the search communities. Lucene is the premiere search API, and is the initial codebase to begin search.apache.org. A healthy thriving community exists around Lucene, with little overlap with other Jakarta projects. Lucene itself has no external dependencies. The search.apache.org will, over time and in conjunction with the Incubator, bring together the ports of Lucene that exist outside of Jakarta Lucene.

Chair

Doug Cutting

Initial PMC members

- Doug Cutting
- Otis Gospodnetic
- Erik Hatcher
- Daniel Naber
- Christoph Goller
- Mark Harwood
