

# DefaultLocale

NOTE: This is outdated information that applies only to Tapestry 4. For current information on localization in Tapestry see <http://tapestry.apache.org/localization.html>.

To set an application default Locale, override the engine method `setLocale` like this:

```
public final void setLocale(Locale locale)
{
    if (getLocale() == null)
        super.setLocale(new Locale(defaultLanguage, defaultCountry));
    else
        super.setLocale(locale);
}
```
