

bin/nutch nutchserver

nutchserver is an alias for org.apache.nutch.api.[NutchServer](#)

Nutch 1.X

[NutchServer](#) is not currently not available in Nutch 1.X. There is however a [Jira ticket for backporting the REST API from Nutch 2.X to Nutch 1.X](#)

Nutch 2.X

Invoking the call to nutchserver ensures that a Nutch Server runs locally on a user defined port... by default this is set to 8081 if none is specified. This is a fully REST API for configuring and administering your Nutch crawler.

```
usage: NutchServer [-help] [-log <logging level>] [-port] [-stop <force>]
  -help                Show this help
  -log <logging level> Select a logging level for the
                        NutchServer.ALL|CONFIG|FINER|FINEST|INFO|OFF|SEVERE
                        |WARNING
  -port                Use port for restful API
  -stop <force>        Stop running nutch server. Force stops server
                        despite running jobs
```

You may also find the documentation on the Nutch 2.X [RESTAPI](#) useful as well as the [NutchWepp](#) documentation.
