

Eclipse

[draft]

[Eclipse](#) is a popular open-source IDE for Java development. Default Eclipse installation includes [Eclipse Rich Client Platform \(RCP\)](#), [Java Development Tools \(JDT\)](#) and [Plugin Development Environment \(PDE\)](#). All these components are working well with Harmony and a lot of Eclipse Unit Tests (EUT) are regularly executed against Harmony builds, see [Eclipse_Unit_Tests_Pass_on_DRLVM](#). Harmony also reuses implementation of Java compiler and Java Debug Interface (JDI) from Eclipse JDT project.
