NuttX Documentation

This is a *snapshot* of the NuttX official documentation. **DO NOT MODIFY** these snapshots. The master of all NuttX official documentation is maintained within the NuttX source code repository ([nuttx/Documentation/](#)) and can only be modified via an approved Github pull request.

To make the documentation render better in confluence, the code in `nuttx/Documentation` was run through [inliner](#) which in-lines all the images and css, if you upload new HTML files please use this tool. If this step is skipped the included images and style will not render. Also all of these files are attached to the root Documentation page (this page) so all references will be updated correctly in other places if you include the new version of the file. You can see all of these files [here](#).

- [About](#)
- [Coding Standard](#)
