# Apache LDAP Client API version 0.1 released

Apache Directory team is pleased to announce the first ever release of the LDAP client API developed in collaboration with OpenDS developers.

Note that this API is still in its preliminary stages and will evolve further in the coming versions.

Features

- Supports synchronous and asynchronous operations
- Very convenient API to perform all LDAP related operations
- Uses MINA version 2.0.0-RC1 in the network layer

We invite interested people to come and participate in this effort to make working with LDAP servers a breeze.
