

# GumpScripts

## GumpScripts

There are a number of scripts available, all with the same commandline interface.

- gump.py – main entry point
- bin/update.py – just does the CVS/SVN updates
- bin/build.py – just does the build portions
- bin/check.py – checks the various entities (projects/modules)
- bin/env.py – checks the environment [for tools Gump uses]
- bin/integrate.py – does it all
- bin/preview.py – preview a run

Some separate scripts:

- gmp.py (a front end to the above)
- gump/test/pyunit.py – Gump unit tests
- gump/gui/view.py – a GUI **work in progress**
- bin/continuous.py – continuously run gump.py **work in progress**

## Commandline Interface

For full details see [GumpCommandLineOptions](#).

All scripts take the following:

~~w [workspace] [project expression [verbose| debug]]~~

e.g.

~~w ../gump.xml jakarta\*~~

-w ../gump.xml all --debug
