

Apache LDAP API version 1.0.0-M6 released

Apache Directory team is pleased to announce the sixth milestone for the Apache LDAP API. It's a bug fix release, fixing one critical issue and some more less important bugs.

Release note

Bugs

- [DIRAPI-49](#) - LdapNetworkConnection.anonymousBind() uses name and credentials from configuration instead of empty values
- [DIRAPI-50](#) - Add additional GssApiRequest property
- [DIRAPI-51](#) - Add cipher suite support to LdapConnectionConfig
- [DIRAPI-52](#) - Connection seems to remain opened, leading to 'Too many open files' on some servers

Improvement

- [DIRAPI-48](#) - Improve error reporting when an UnresolvedAddressException is thrown while connecting

As it's a milestone, our users have to be warned that some new features may be added, and some refactoring done.

However, we engage anyone who want to help to test this release and bring back some feedback !

Features

Supports synchronous and asynchronous operations
Very convenient API to perform all LDAP related operations
Schema aware operations
OSGI capable API
DSML/LDIF format support

We invite interested people to come and participate in this effort to make working with LDAP servers a breeze.
