Apache Directory Server 2.0.0-M2 released !

Apache Directory team is pleased to announce the release of Apache Directory Server version 2.0.0-M2, which is the second milestone toward a 2.0 version.

This version is the first one which include a working Master-Slave replication, plus many other bug fixes.

It has to be noted that we are not using anymore the server.xml configuration file, as all the configuration is now stored in the DIT.

Some part of the server are now OSGi compliant, and we want the 2.0-GA to be fully OSGi compliant.

Note that this is a milestone, and some parts of the API or configuration can change before the 2.0 GA. We don't have any defined time frame for the 2.0-G1 release, we do expect to release a few more milestones before reaching the 2.0-GA.
