

MyFaces Commons ResourceHandler

MyFaces Commons ResourceHandler is a project aiming to provide a place where to find utilities for create Resource Handler instances and a Extended ResourceHandler which has some useful features like:

- GZIP compression and local cache in tmp dir.
- i18n (supporting country code and language).
- Prevent use #{resource'...'} on css files, using prefix mapping
- Prefix mapping automatic detection
- Override request path generation using EL expressions
- Redirect library names to prevent duplicate usage against other JSF libraries.

Just add this jar to your project and register on a WEB-INF/myfaces-resources-config.xml file or META-INF/myfaces-resources-config.xml the libraries that needs to be handled by the ExtendedResourceHandler. Look on the [Web Context Parameter List](#) for the available parameters.
