

FOM%context

FOM: The Context Object

---methods---

- `getAttribute(name)`
- `getAttributeNames()`
- `setAttribute(name,value)`
- `removeAttribute(name)`
- `getInitParameter(name)`

---properties---

[name] -> maps to the attribute indicates with the name

For example `context.blah` is equivalent to `context.getAttribute("blah")`

or as **alternative**:

[name] -> maps to the attribute indicates with the name

For example `context.blah` is equivalent to `context.getInitParameter("blah")`
