

# SaProxy

## SAProxy

SAProxy is a non-commercial non-supported proxy packaging. For commercial alternatives, look [CommercialWindows](#)

(\*note\*: see also [SpamFuProxy](#), inhering from SAProxy; open source free little version available; working with [SpamAssassin](#) 3.0.2)

(see also [SpamAssassin for Win32](#) for a version with [SpamAssassin](#) 3.1.0; this version includes SSL support, unlike [SpamFuProxy](#))

The SAProxy non-commercial proxy continues to be available, although the integration with SA 3+ is not straightforward.

Free windows based pop3 proxy for [SpamAssassin](#).

SAProxy is based on [Pop3Proxy](#) from Dan Mc Donald. It is an open source (perl) proxy server that seems to mostly work for Windows machines. Setting it up is \*not\* point-and-click easy, however. Needs Perl installation.

SAProxy was derived/repackaged by Dan Mc Donald, Johan Lindstrom and [DanielQuinlan](#) (last one commissioned by [Stata Labs's](#))

SAProxy **Phoenix**  (2004-Oct-22) may be on its way? (Dan Wing has been able to install it with SA 3.0)

Have a look to [http://sourceforge.net/mailarchive/forum.php?thread\\_id=5812011&forum\\_id=27500](http://sourceforge.net/mailarchive/forum.php?thread_id=5812011&forum_id=27500)

Notes for SAProxy:

- Free; With GUI
- [SaProxyStatus](#): History, situation and perspectives
- [SaProxyByHand](#): How to install [SaProxy](#) (without [SpamAssassin](#)) from scratch. Not for heart-fainted people, but works for latest [SpamAssassin](#) versions (that need to be installed apart, as well as Perl)
- [SpamAssassin UsingOnWindows](#) How To: install and use [SpamAssassin](#) in Windows. Michael Bell has an excellent guide. And a configuration GUI.
- Old version, self-installing package, easy to install, packages updated [Pop3Proxy](#), GUI and (old version) of [SpamAssassin](#); no need for Perl installation. Currently available in limbo?

**There used to be a "handly available" free version.** [Stata Lab's FAQ](#)  said (the page is not anymore available. By 2004-Oct-20 this web site had the following statements:

[...] Stata Labs has been acquired by Yahoo! [...]

[...] Will Yahoo! sell Bloomba or SAproxy Pro? **At this time there are no plans for Yahoo! to sell Bloomba or SAproxy Pro** [...]

*What happened to the free version?* - Last year, Stata Lab's offered a free open source version of SAproxy 1.2. This version could also be found in the Open Source community for [SpamAssassin](#). However, the product did not have a simple configuration or intuitive user interface, and, as a result, was difficult for the majority of users to understand and implement. In order to bring the power of SAproxy to a larger audience of users, Stata Labs put in a significant amount of effort to create, SAproxy Pro, which is easier to use, configure and refine. SAproxy Pro is the commercial version of SAproxy, complete with support and ongoing improvements.

**By 9 September 2004 (Not any longer available)** Stata Lab's web said: <http://www.statalabs.com/support/saproxypro/WebHelp>

[/About\\_Spam\\_Assassin.htm](#) 

SAproxy Pro complies with the Perl Artistic License in the following ways:

Following 3(a) by placing the modifications in the Public Domain

Following 4(b) by distributing a standard version of [SpamAssassin](#), which is available here <http://cvs.sourceforge.net/cgi-bin/viewcvs.cgi>

[/spamassassin/](#)  under the "spamassassin" module

## Stata Labs' SAProxy PRO

**2004-Oct-20: NOT any longer available**

It was a non-free derived-version of SAProxy

- [SAProxy](#) Pro by Bloomba is a Windows proxy server that's easy to set up and works quite well. It's \$30.

Seem to be some claims regarding support.

[SaProxy](#) Pro (I have not tested) seems do what [SaProxy](#) (to wrap SA and [Pop3Proxy](#) in a win installation and GUI, no Perl installation needed) plus interaction (mark spam/ham) to statalabs email client.
