

S4 0.5

S4 (Simple Scalable Streaming System) is a general-purpose, distributed, scalable, fault-tolerant, pluggable platform that allows programmers to easily develop applications for processing continuous, unbounded streams of data.

The documentation for S4 0.5.0 is currently hosted on this wiki. Documentation for the previous release is available [here](#).

Getting Started

- You may start with an [overview](#) of the platform
- Then follow a [walkthrough](#) for an hands-on introduction
- And [here](#) are some tips to ease the development process

Configuration

- How to [customize the platform and pass configuration parameters](#)
- How to [add application dependencies](#)
- How to [dispatch events](#) within an application and between applications

Features

- Details about [fault tolerance](#)

Troubleshooting

- Try the [FAQ](#)
- Try the [mailing lists](#)
