

JavaScript

JavaScript

Camel supports [JavaScript/ECMAScript](#) among other [Scripting Languages](#) to allow an [Expression](#) or [Predicate](#) to be used in the [DSL](#) or [Xml Configuration](#).

To use a JavaScript expression use the following Java code

```
... javascript("someJavaScriptExpression") ...
```

For example you could use the **javascript** function to create an [Predicate](#) in a [Message Filter](#) or as an [Expression](#) for a [Recipient List](#)

Example

In the sample below we use JavaScript to create a [Predicate](#) use in the route path, to route exchanges from admin users to a special queue.

```
from("direct:start")
    .choice()
        .when().javascript("request.headers.get('user') == 'admin'").to("seda:adminQueue")
        .otherwise()
            .to("seda:regularQueue");
```

And a Spring DSL sample as well:

```
<route>
  <from uri="direct:start"/>
  <choice>
    <when>
      <javascript>request.headers.get('user') == 'admin'</javascript>
      <to uri="seda:adminQueue"/>
    </when>
    <otherwise>
      <to uri="seda:regularQueue"/>
    </otherwise>
  </choice>
</route>
```
