

Java

Become a contributor

You need to be added as a contributor to edit the wiki. But don't worry! Just email any [Mailing List](#) or grab us on [IRC](#) and let us know your user name.

- [Clients](#)

Clients

- <https://github.com/IBM/cloudant-java-sdk> - IBM Cloudant's Apache 2 licensed official client library for Java that is also compatible with Apache CouchDB.
- [Couch Slacker](#) - Spring Data integration for CouchDB, supporting native Spring Data repositories, query method, etc. Dependency is available on [maven central](#) so it is very easy to use...
- [Ektorp](#) - Ektorp is a persistence API that uses [CouchDB](#) as a storage engine. The goal of Ektorp is to combine JPA like functionality with the simplicity and flexibility that CouchDB provides.
- [LightCouch](#) - LightCouch aims at providing a simple API for communicating with CouchDB databases.
- [CouchRepository](#) - Spring Data repositories for CouchDB. Delegates internally to Ektorp or LightCouch.

Older, probably outdated Java clients:
