

Installation

Installation

Installation is easiest from an update site. In Eclipse, select Help, Software Updates, Find and install...

[blocked URL](#)

Select 'Search for new features to install'

[blocked URL](#)

Select 'New Remote site'. Enter 'OpenEJB' for the name and <http://people.apache.org/~jgallimore/update-site/> for the URL. Click 'Ok' and make sure your new update site is selected. Then select 'Finish'

Check the box to install the OpenEJB feature. Click 'Next'

[blocked URL](#)

Read and make sure you're happy with the license agreement.

Check the installation location, and change it if you wish to. Select 'Finish'.

Restarting the workbench when the installation is finished is recommended.
