

How to get daily Geronimo Eclipse Plugin builds

[How to Develop Geronimo Eclipse Plugin in Eclipse](#)

[Apache Geronimo Development Tools Project](#)

[How to open a bug for Geronimo Eclipse Plugin](#)

Daily builds are available and can be downloaded from Geronimo Eclipse Plugin nightly build site <http://people.apache.org/dist/geronimo/eclipse/unstable/>

- Find **updatesite** and **deployable** zip files in their release number directory, eg, 2.1.3.
- The **updates** directory is an Eclipse update site, with the full contents of the production GEP update site <http://www.apache.org/dist/geronimo/eclipse/updates/>, as well as those of releases currently under development.
 - To install the nightly build via the Eclipse update manager from this image, define a remote update site in Eclipse with this URL: `*http://people.apache.org/dist/geronimo/eclipse/unstable/updates/`.
 - For details, see [Installing GEP using Eclipse update manager](#), using the above URL for the Eclipse update manager site.

The available builds should also be used with all official releases of [Apache Geronimo](#).

In case you find any issues see [How to open a bug for Geronimo Eclipse Plugin](#).
